

Markdown To Report

A collection of scripts to generate LaTeX formatted PDFs

Kai Wells

Github Example

Received: April 7, 2015

**Normally this is a brief summary of the important results found in an experiment.
This is just an example.**

1 Introduction

This is a brief example of what this collection of scripts does. The metadata above is used to generate the title page of the report.

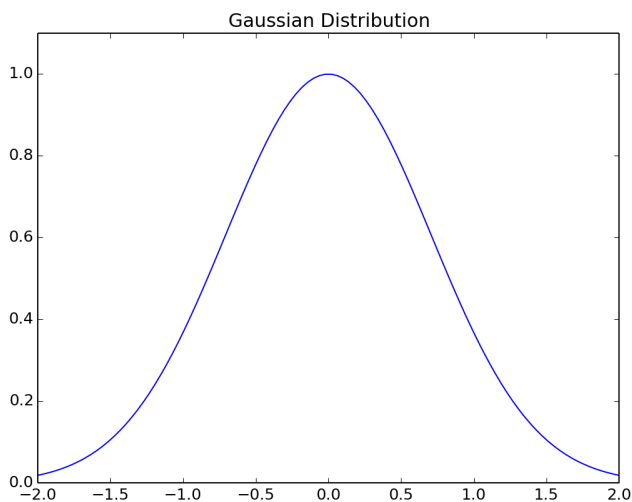

Figure 1: Images with captions are defined like so.

Table 1: This is an example table.

a	b	c	d
1	2	3	4

Figure and table labels are required and must appear in [square brackets] below the object they are labeling.

$$E = mc^2 \tag{1}$$

Equations have to be entered in standard LaTeX format. As do *italicized* and **bolded** passages. I'll work on that in the future.

Careful of typos! The makefile will hang if it encounters a LaTeX error while converting to PDF.
